

Dundonnell Wind Farm– Construction update

The Tilt Renewables team has commenced construction of the \$560 million Dundonnell Wind Farm located approximately 23km north-east of Mortlake, in the Western District of Victoria. Work by AusNet Services on the transmission line, has also commenced.

Initially, Tilt Renewables will work on construction of the Woorndoo-Streatham Rd upgrade over the coming weeks.

Tilt Renewables' subcontractors, Vestas and Zenviron, have taken up a temporary office in Mortlake, where they will remain until the site facilities are established.

Large machinery, including earthmoving equipment, and a small shed, (associated with the road upgrade) will be delivered to southern section of Woorndoo-Streatham Road. Site establishment activities including the quarry and some access tracks will commence soon after.

In the next few weeks the construction of the transmission line will really begin to get underway. You will see an increase in families and workers moving into the area. You will also see more cars branded Downer and AusNet Services doing visits along the transmission corridor.

The project teams are working closely with landowners and other stakeholders to ensure they share information about the up and coming construction works, as well as scheduling works to minimise impacts on cropping and grazing activities where possible.
