

## **ANNOUNCEMENT**

July 22, 2022

### **Dundonnell Wind Farm Operational**

Dundonnell Wind Farm is now fully operational with the final commissioning and certification complete. Following an assessment of the final commissioning outcomes, final practical completion was backdated to 17 June 2022. The completion of our largest operating wind farm marks an exciting milestone for Tilt Renewables and Victoria.

This achievement comes on the back of a journey lasting over a decade where we, in partnership with our host landholders, delivery partners and local and state government have taken the project from planning, into construction and now operation. We have continued to learn on this journey and even now are applying these lessons on our projects across Australia.

The 336 MW Dundonnell Wind Farm will avoid up to 1,300,000 tonnes of carbon emissions every year while bringing lasting benefits to the local community, economy, and environment. The Dundonnell Wind Farm now generates enough clean energy to power approximately 245,000 homes – more than Ballarat, Geelong, and Warrnambool combined.

Tilt Renewables would like to express our gratitude to our host landholders who have worked with us to realise this achievement.

We would also like to thank the Community Fund Committee for your help administering the fund. We are in the process of organising a celebration to mark this milestone and will be in contact soon with the event details.

Tilt Renewables is proud to announce we achieved practical completion of the 336MW Dundonnell Wind Farm located in Western Victoria on 17 June 2022, successfully completing all construction works and full commissioning of all 80 turbines. The completion of our largest operating wind farm marks an exciting milestone for Tilt Renewables and Victoria.

To celebrate, last week we met on site for the official opening and to recognise everyone's role in making this Project happen. With the 4.2MW Vestas V150 wind turbines busy generating clean energy, Geoff Dutaillis our CEO and guest speakers recognised Dundonnell Wind Farm's role in helping Australia transition to clean energy while benefiting the local community through support for organisations such as [Lifeline Australia](#), [Federation University Australia](#) and the [Odonata Foundation](#) Foundation.

This achievement was made possible by our host landholders, delivery partners [Vestas](#), [AusNet](#) and [Zenvion](#), the [Victorian Government](#) and [Moyne Shire Council](#) who helped us take the project from planning, into construction and now operation.

100 per cent of the power generated from the Dundonnell Wind Farm is contracted to the Victorian State Government under the Victorian Renewable Energy Auction Scheme, [Snowy Hydro Limited](#) through its Renewable Energy Procurement Program and to [ALDI Stores Australia](#).

Special thanks to the Hon. Lily D'Ambrosio MP, for her ongoing support as Minister for Energy, Minister for Environment and Climate Action, Minister for Solar Homes and her inspiring words to celebrate the opening. Tilt Renewables would also like to thank the Maar Nation and the members of [Eastern Maar Aboriginal Corporation](#) for warmly welcoming us to Country.
