RYE PARK COMMERCIAL OPERATIONS

Celebrating a fantastic start to our partnership with [Newmont Australia](#) at Rye Park Wind Farm.

Newmont's operations are powering a greener future, supplied by 55% of Rye Park Wind Farm's output to decarbonise the Cadia mine in Orange, NSW.

Rye Park is supplying around half of Cadia's power needs each year. We're looking forward to meeting these needs via our PPA for the next 15 years.

This is a crucial step for one of our customers and towards achieving a shared goal of reducing greenhouse gas emissions. Together, Tilt Renewables and Newmont are excited to lead the way in sustainable mining practices.

It's a great illustration of how industry can work together to reduce emissions and work on solutions to mitigate the climate crisis.

Let's continue to work together towards a sustainable, greener future!

A photograph of a large white wind turbine standing in a vast, open landscape under a clear blue sky. The turbine is positioned in the foreground, with rolling hills and sparse vegetation in the background.

FEATURED PROJECT

Rye Park Wind Farm

Project Status: Generating Asset
Maximum Capacity: 396 MW
Annual Output: 1,188 GWh
Location: Rye Park, New South Wales
Turbines: 66 X Vestas EnVentus V162-6.0MW Turbines
Blade Tip Height: 200 Metres
Grid Connection: TransGrid's Existing 330kV '3J' Transmission Line
Construction Started: 2021
