

December 2024

Dear Resident,

### **Liverpool Range Wind Farm - Upcoming Site Investigations**

Following the approval of the Modification Application for the Liverpool Range Wind Farm, Tilt Renewables is progressing site investigations to inform technical studies and detailed project planning and will undertake minor works before construction.

Over the coming months, we are planning to complete site and boundary surveys, as well as geotechnical pavement investigations on the following roads:

- Bounty Creek
- Coolah Creek
- Rotherwood
- Vinegaroy
- Yarrawonga.

Geotechnical works will involve drilling boreholes and locating services within the road reserve. Equipment that may be used includes light vehicles, a vacuum truck and a vehicle mounted drill.

To safely complete these investigations, traffic management will be required on the road during the work. Traffic controls such as temporary traffic lights, signage and speed limits reductions, will be in place to manage traffic during this period.

Vehicles may have to briefly stop on the roads and wait for a signal before continuing through the areas where investigation works are being undertaken. Access will be maintained to all properties, and stock movements can continue as per Local Land Services requirements.

For questions about stock movements please contact our contractor's site representative on 0400 570 969 or 0409 101 283.

A site office compound will also be set up to support investigations. Work will take place between 7am to 6pm Monday to Friday and 8am to 1pm on Saturdays. No work will take place on Sundays or public holidays.

You may also see our contractors undertaking site and boundary surveys in the road reserve during this period. Our contractors will keep any noise and disruption to a minimum.

For further information about our site investigations please contact us on 1800 WE TILT (938 458) or [liverpoolrangewindfarm@tiltrenewables.com](mailto:liverpoolrangewindfarm@tiltrenewables.com).

Yours sincerely

Nick Daly
